Internet Technologies Laboratory exercise

Introduction to MVC

In this lab, you will develop a basic Event Management System using ASP.NET MVC. The system will allow users to create, update, delete, and display a list of all events.

Technology: ASP.NET MVC, C#, Entity Framework
Description: Academic project that allows CRUD operations for managing patients, doctors, and appointments. Built using MVC architecture with Razor views, models, and controllers.
Purpose: Demonstrates my ability to build full-stack web applications using .NET tools.
